

Deep Learning in Higher Dimensions

Multi-Dimensional ConvNets

- 1D ConvNets
 - Audio / Speech
 - Also Point Clouds
- 2D ConvNets
 - Images (AlexNet, VGG, ResNet -> Classification, Localization, etc..)
- 3D ConvNets
 - For videos
 - For 3D data
- 4D ConvNets
 - E.g., dynamic 3D data (Haven't seen much work there)
 - Simulations

Remember: 1D Convolutions

1D ConvNets: WaveNet

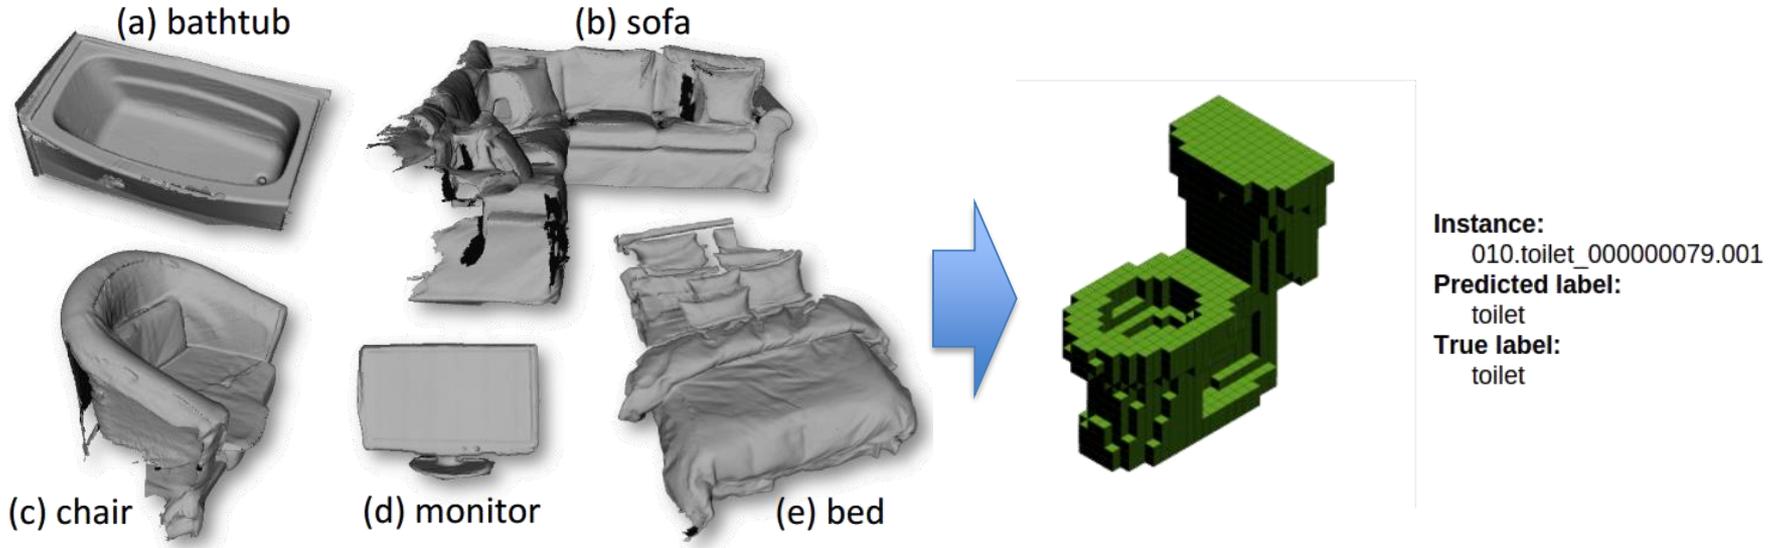

1 Second

1D ConvNets: WaveNet

3D Classification

Class from 3D model (e.g., obtained with Kinect Scan)

3D Semantic Segmentation

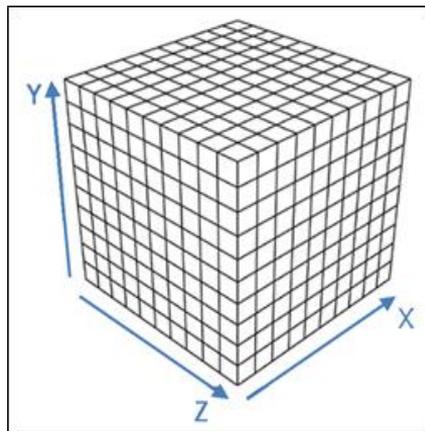

1500 densely annotated 3D scans; 2.5 mio RGB-D frames

Volumetric Grids

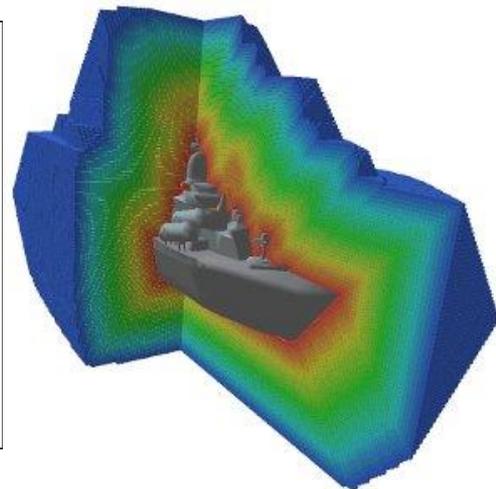

Volumetric Grids

Volumetric Data Structures

- Occupancy grids
- Ternary grids
- Distance Fields
- Signed Distance fields

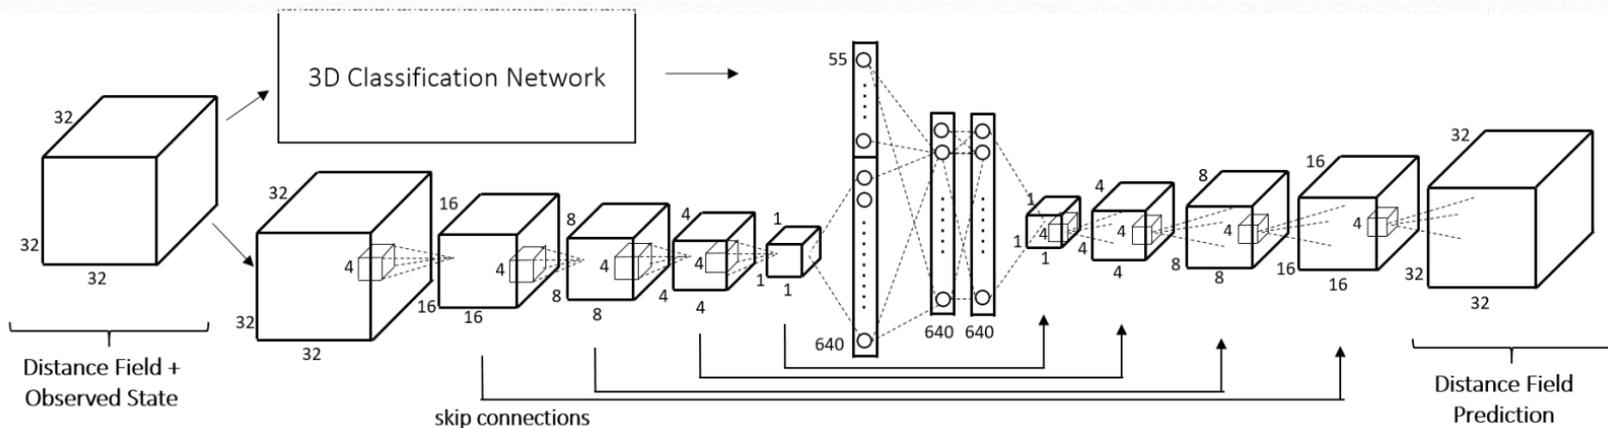

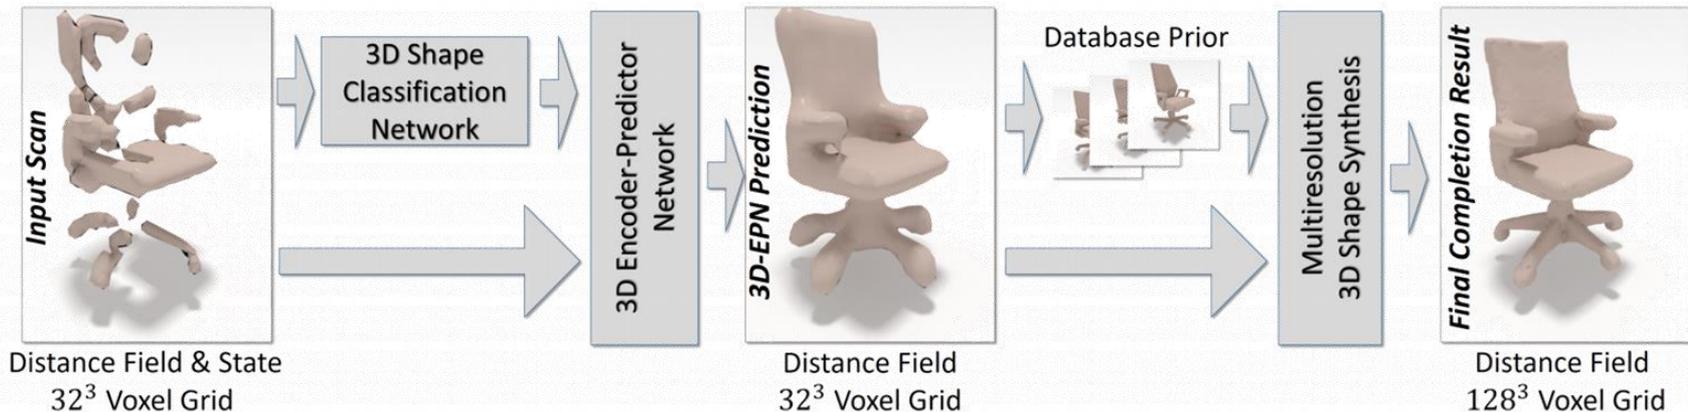

(binary) Voxel Grid

| Method | ℓ_1 -Err (32^3) | ℓ_1 -Err (128^3) |
|-----------------------------|--------------------------|---------------------------|
| Ours (3D-EPN + synth) | 0.382 | 1.94 |
| Ours (3D-EPN-class + synth) | 0.376 | 1.93 |
| Ours (3D-EPN-unet + synth) | 0.310 | 1.82 |
| Ours (final) | 0.309 | 1.80 |
| 3D-EPN-unet-class + synth | | |

Shape completion error (higher == better)

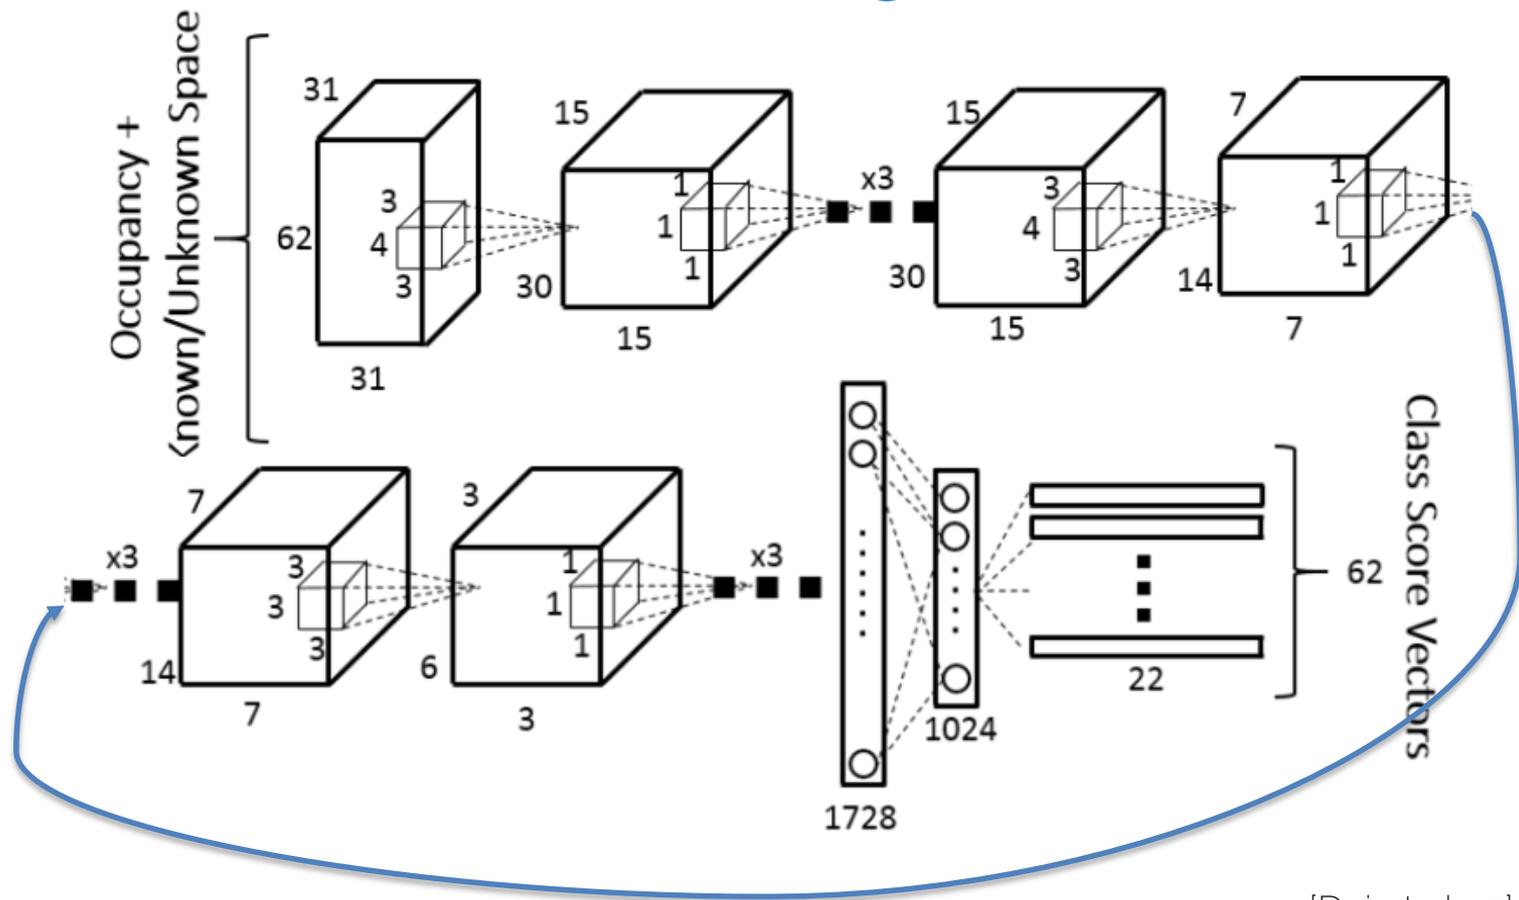

3D Shape Completion on Grids

Works with $32 \times 32 \times 32$ voxels...

[Dai et al. 17] CNNComplete

ScanNet: Semantic Segmentation in 3D

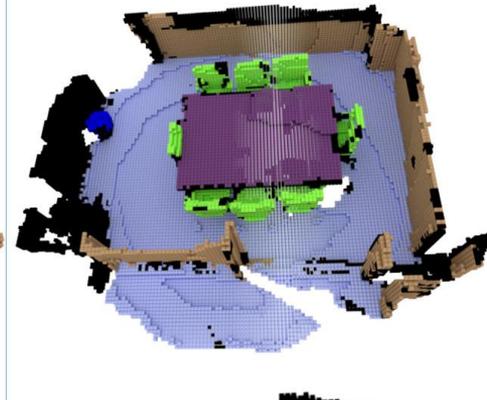

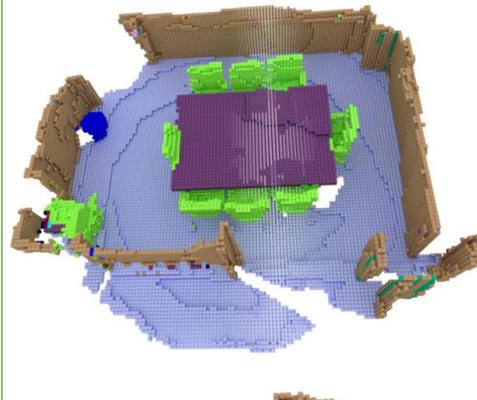

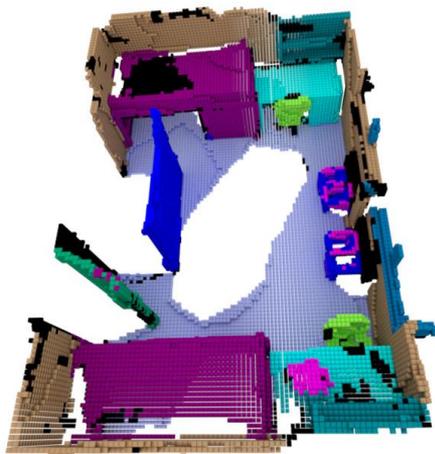

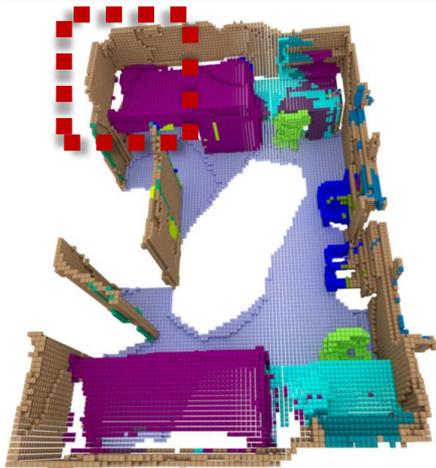

ScanNet: Sliding Window

Voxel Predictions

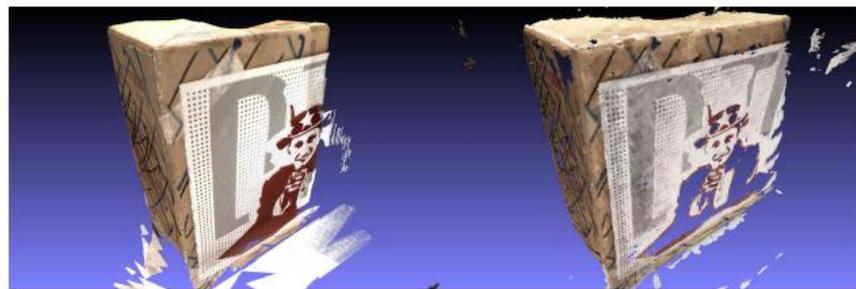

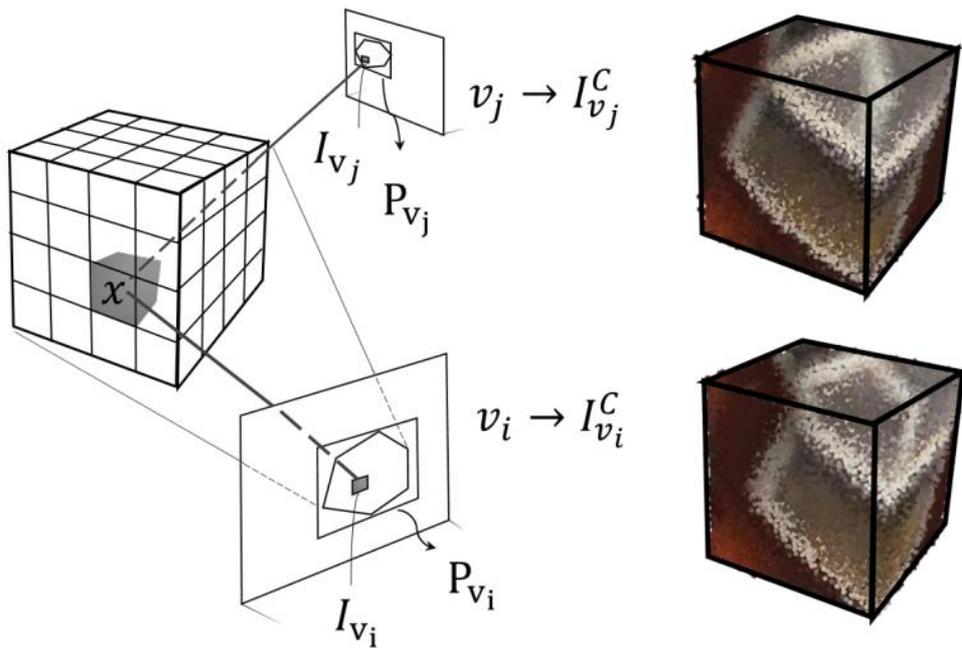

Ground Truth

Voxel Predictions

Ground Truth

SurfaceNet: Stereo Reconstruction

(a) reference model

(b) **SurfaceNet**

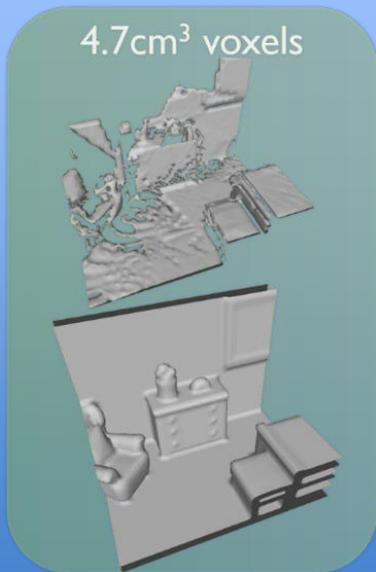

Run on $32 \times 32 \times 32$ blocks -> takes forever...

ScanComplete: Fully Convolutional

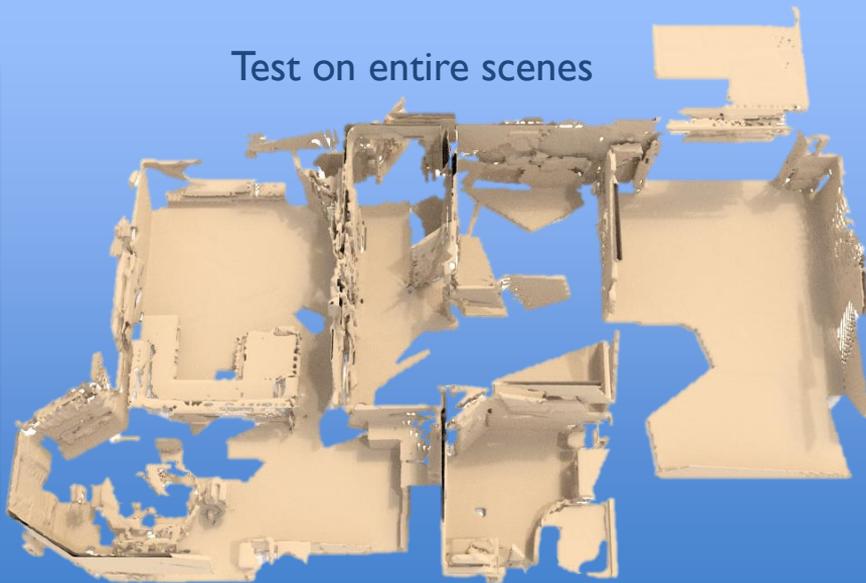

Train on crops of scenes

Train Block:
Input
Partial Scan

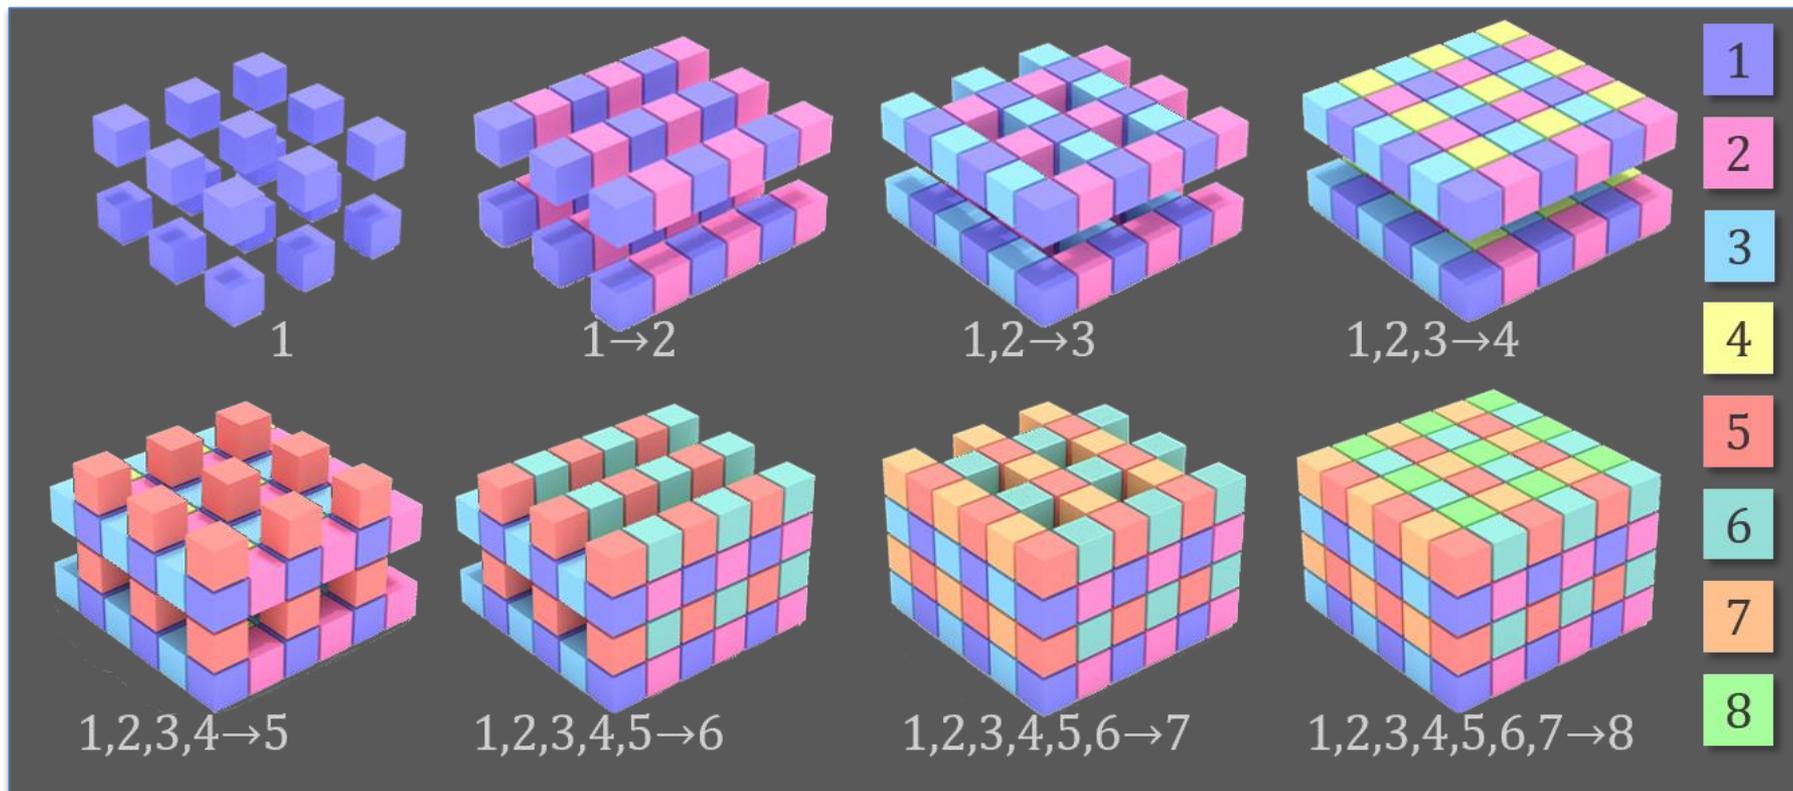

Train Block:
Complete
Target

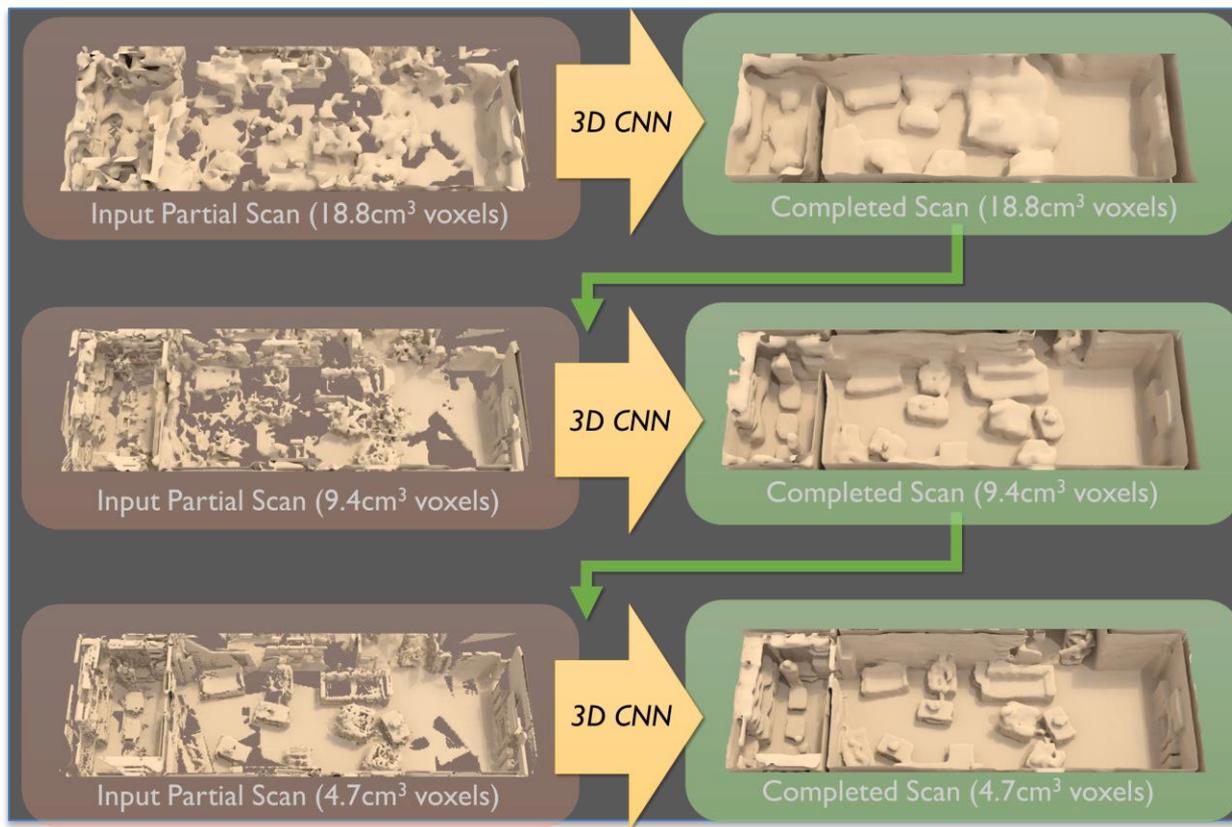

Test on entire scenes

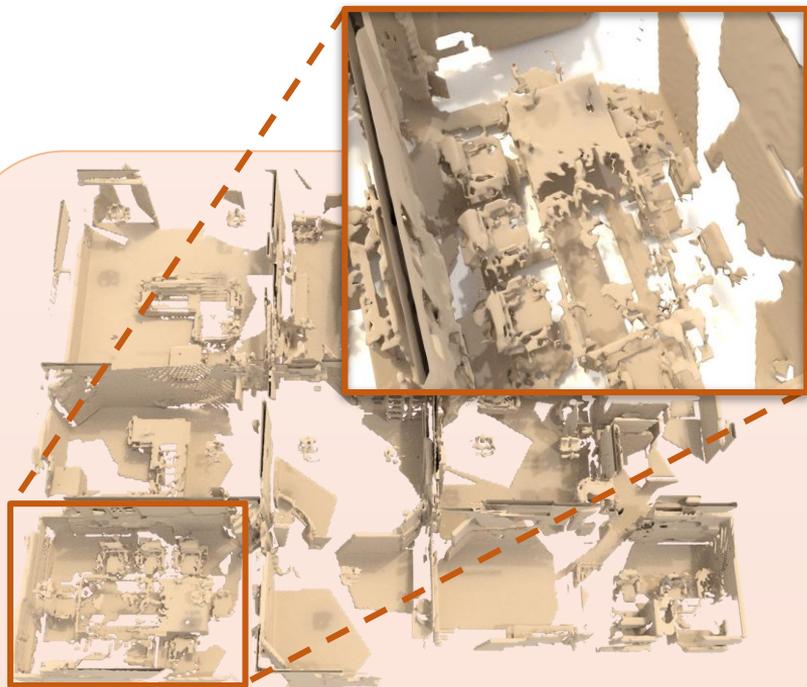

Dependent Predictions: Autoregressive Neural Networks

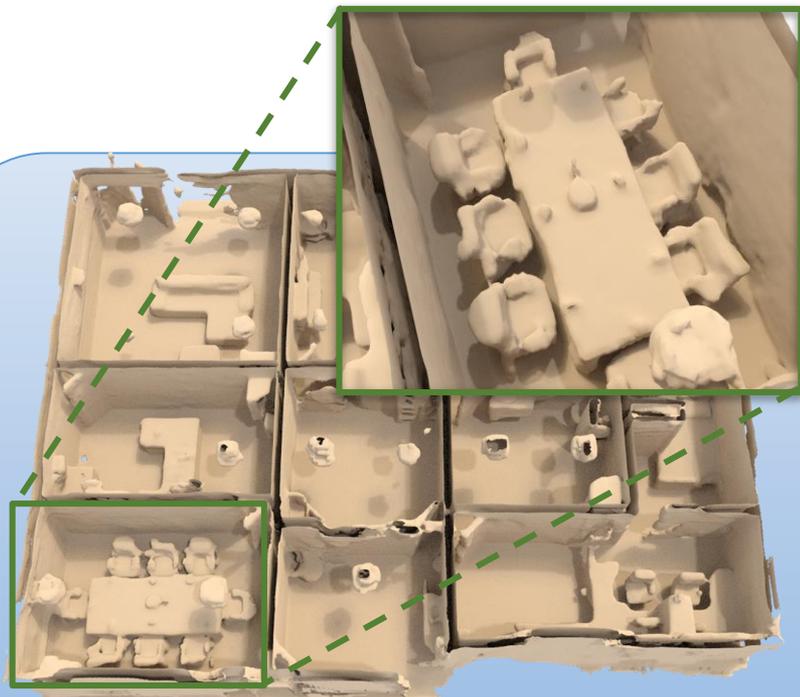

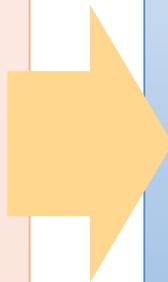

Spatial Extent: Coarse-to-Fine Predictions

ScanComplete: Fully Convolutional

Input Partial Scan

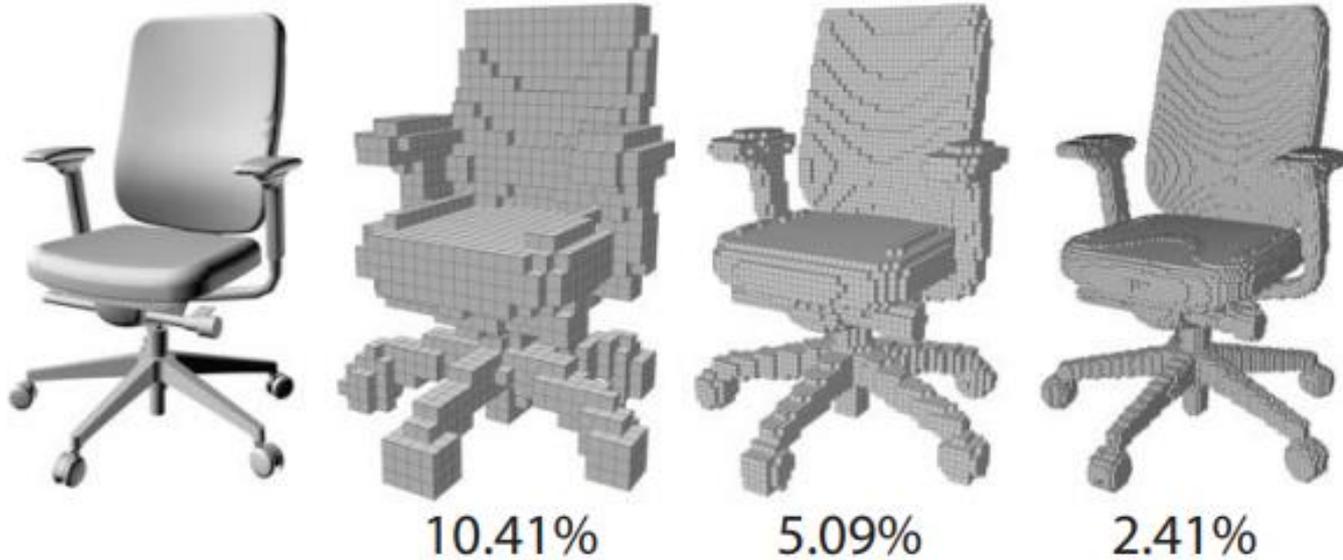

Completed Scan

Conclusion so far

- Volumetric Grids are easy
 - Encode free space
 - Encode distance fields
 - Need a lot of memory
 - Need a lot of processing time
 - But can be used sliding window or fully-conv.

Conclusion so far

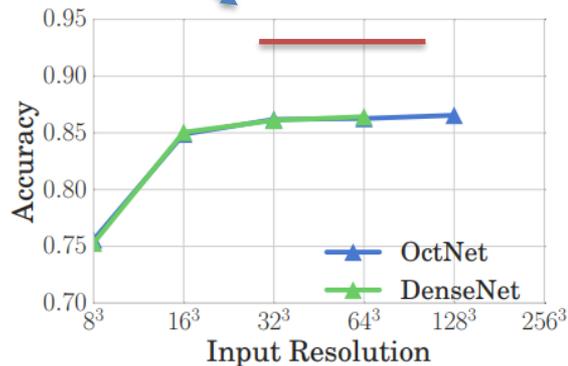

Surface occupancy gets smaller with higher resolutions

Volumetric Hierarchies

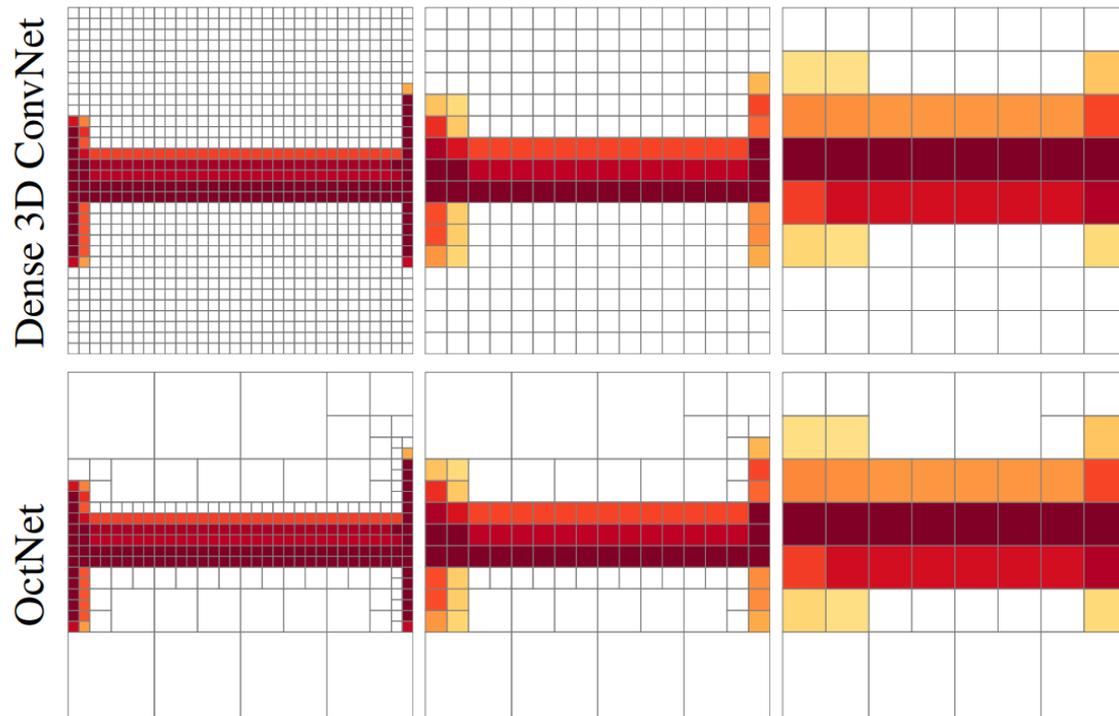

Discriminative Tasks

Structure is known in advance!

State of the art is somewhere here...

(b) Accuracy

(a) Layer 1: 32³

(b) Layer 2: 16³

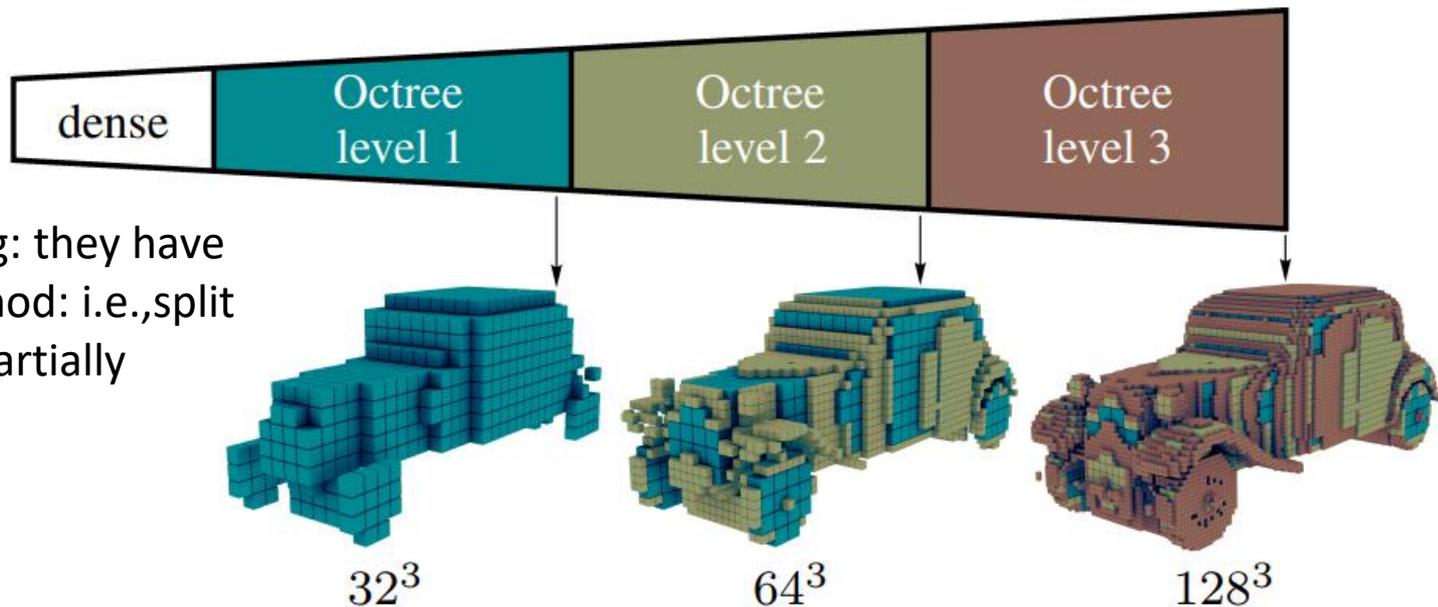

(c) Layer 3: 8³

[OctNet: Learning Deep 3D Representations at High Resolutions \(CVPR 2017\)](#)

[O-CNN: Octree-based Convolutional Neural Networks for 3D Shape Analysis \(SIG17\)](#)

Generative Tasks

Need to infer structure!

Pretty interesting: they have end-to-end method: i.e., split voxels that are partially occupied

[Octree Generating Networks: Efficient Convolutional Architectures for High-resolution Outputs](#)
[OctNetFusion: Learning Depth Fusion from Data](#) (that one not end to end)

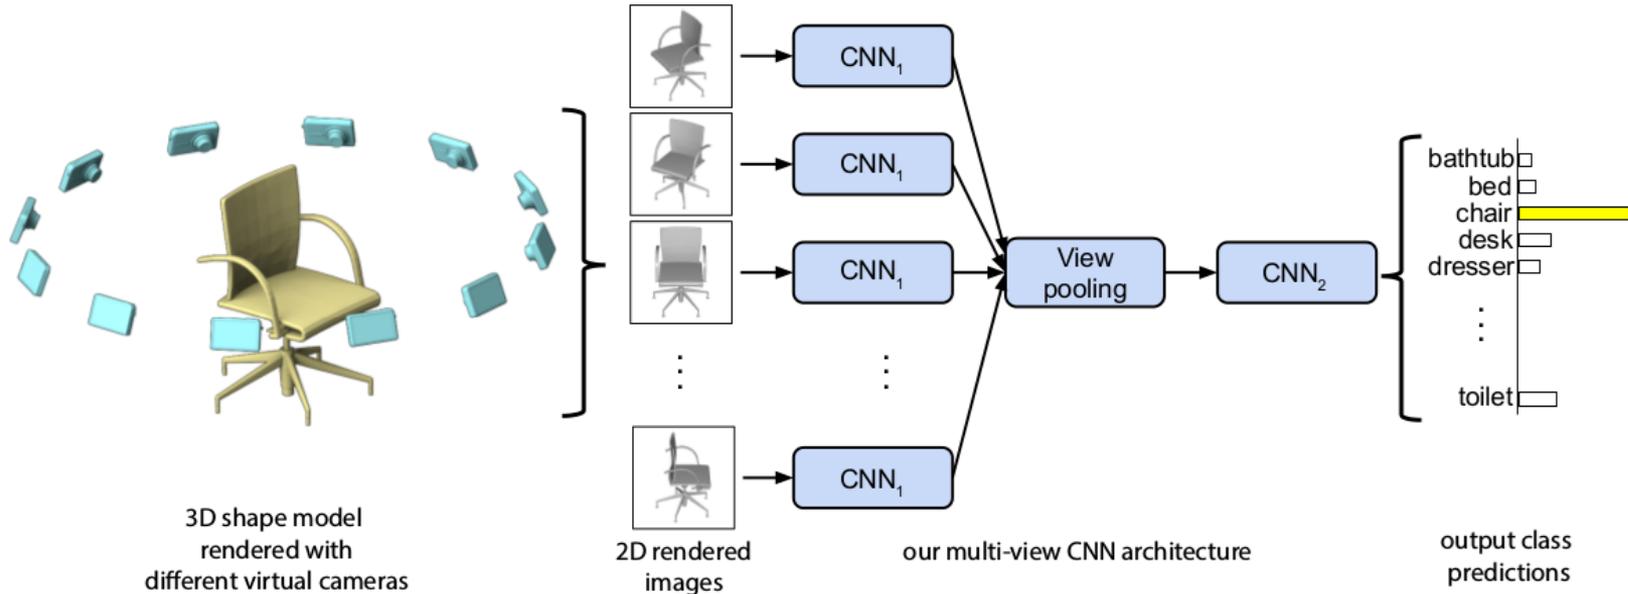

Conclusion so far

- Hierarchies
 - are great for reducing memory and runtime
 - Comes at a performance hit
 - Easier for discriminative tasks when structure is known

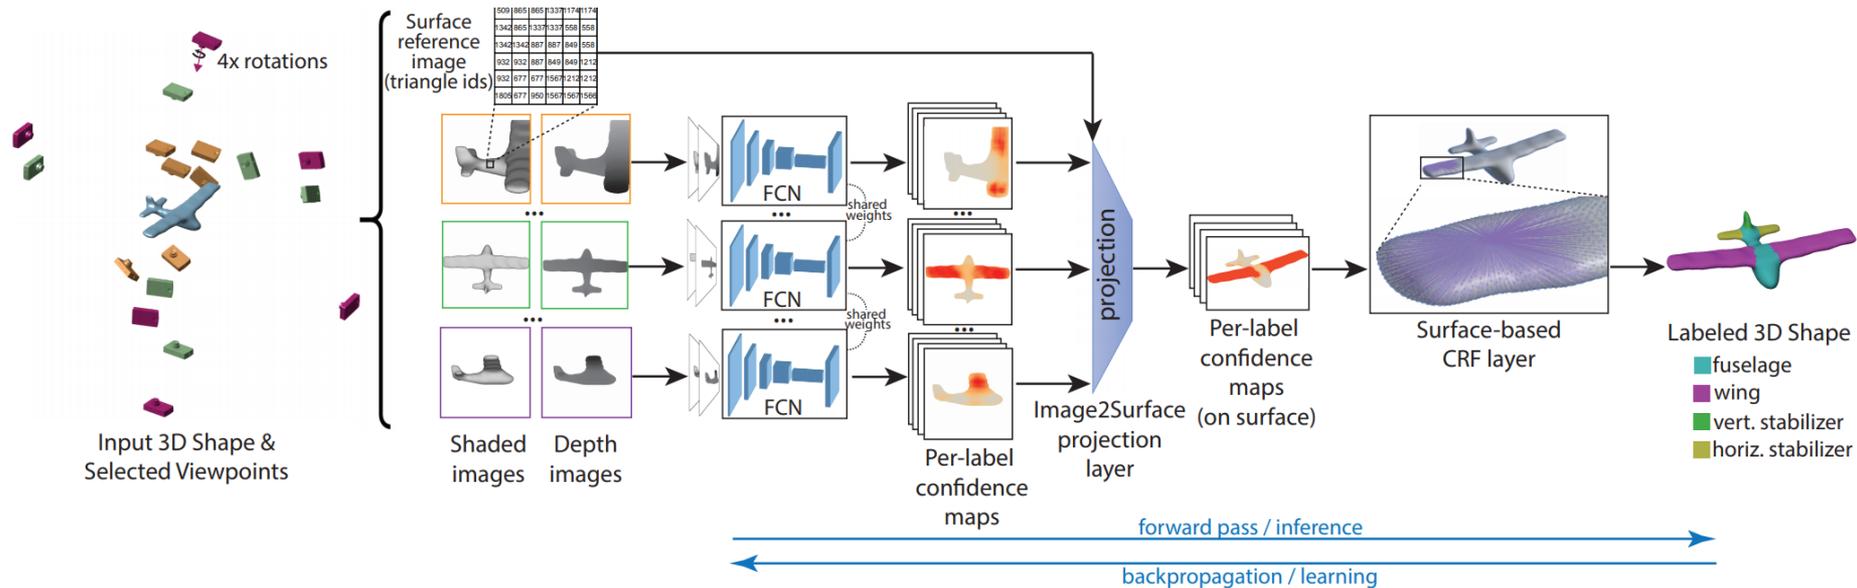

Multi-view

Multiple Views: Classification

- RGB images from fixed views around object:
 - view pooling for classification (only RGB; no spatial corr.)

Multiple Views: Segmentation

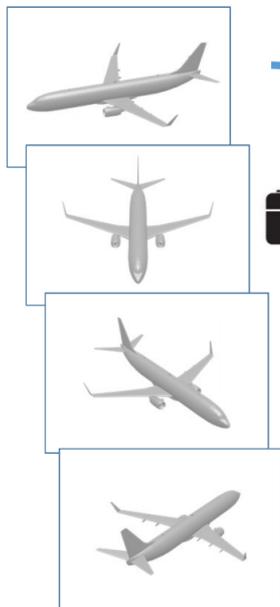

3D Shape Segmentation with Projective Convolutional Networks

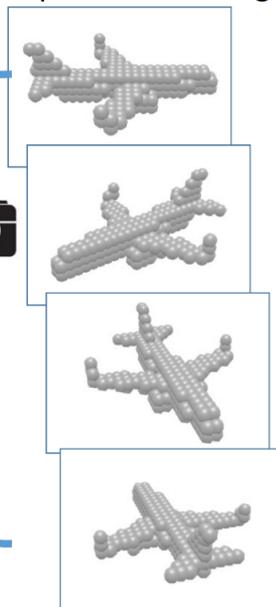

This one is interesting in a sense that it does 3D shape segmentation (only on CAD models)
But it uses multi-view and has a spatial correlation on top of the mesh surface

Fun thing...

Multi-View Standard Rendering

Multi-View Sphere Rendering

3D Shape

Volumetric Occupancy Grid

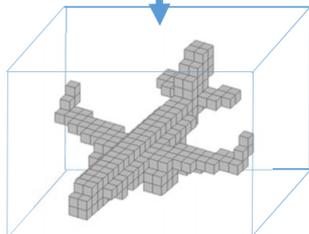

Figure 1. 3D shape representations.

| Method | #Views | Accuracy (class) | Accuracy (instance) |
|------------------------|--------|------------------|---------------------|
| SPH (reported by [33]) | - | 68.2 | - |
| LFD (reported by [33]) | - | 75.5 | - |
| FV (reported by [32]) | 12 | 84.8 | - |
| Su-MVCNN [32] | 80 | 90.1 | - |
| PyramidHoG-LFD | 20 | 87.2 | 90.5 |
| Ours-MVCNN | 20 | 89.7 | 92.0 |
| Ours-MVCNN-MultiRes | 20 | 91.4 | 93.8 |

Table 3. Comparison of multi-view based methods. Numbers reported are classification accuracy (class average and instance average) on ModelNet40.

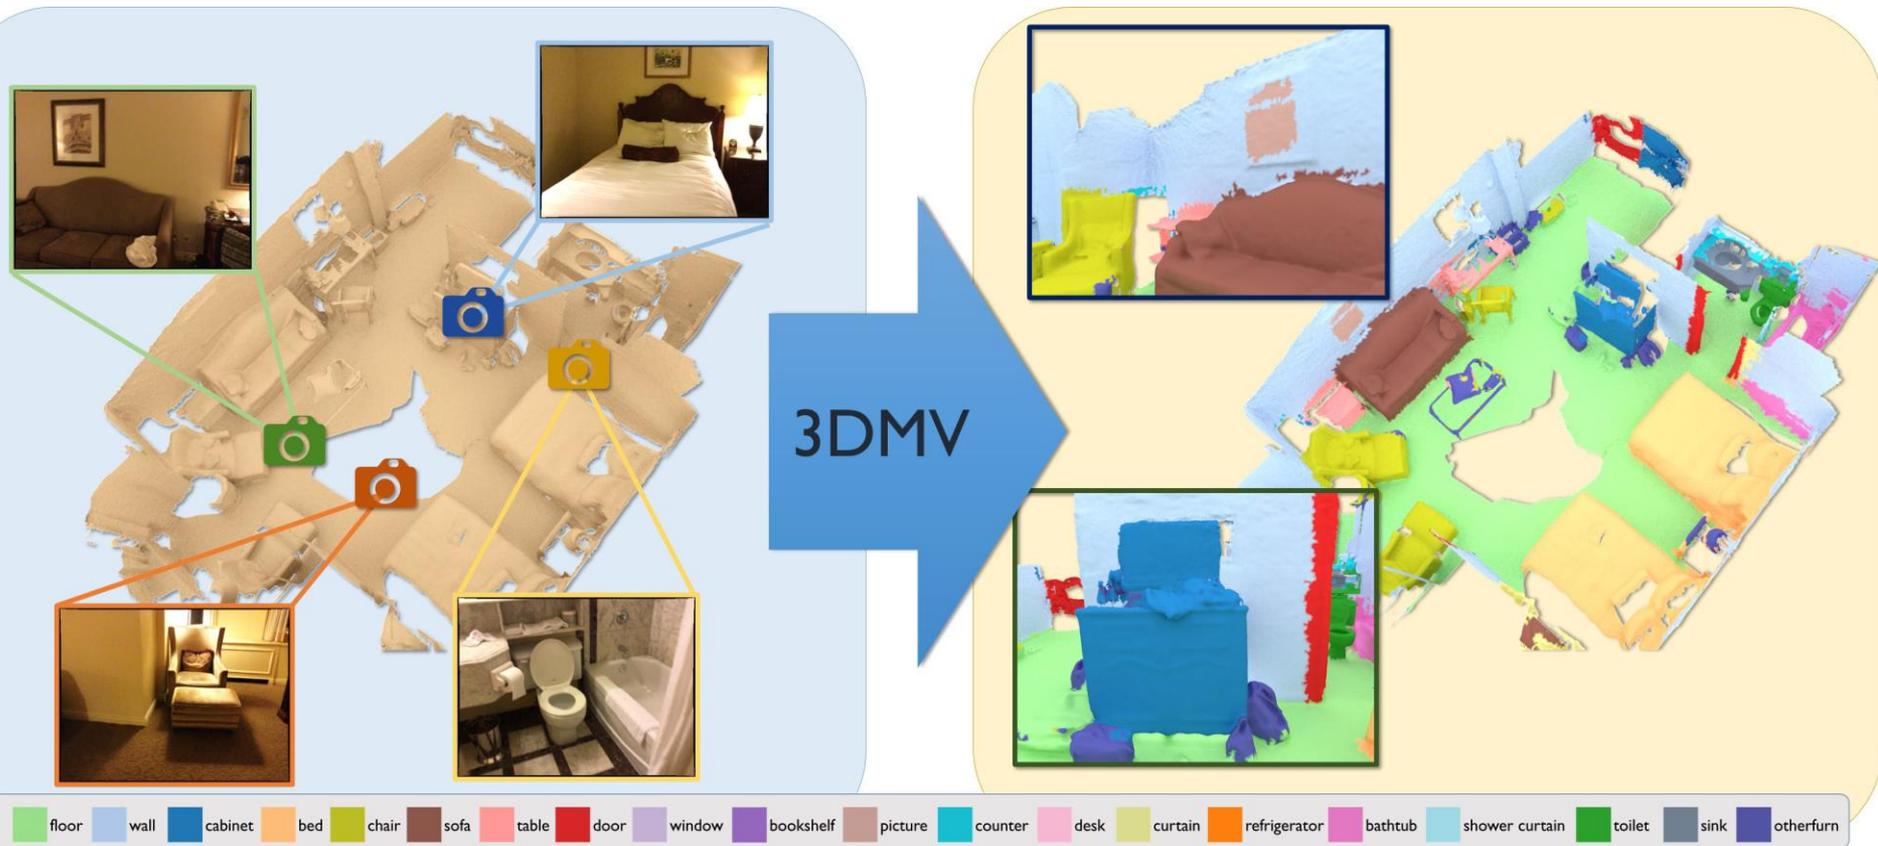

Hybrid: Volumetric + Multi-view

2D + 3D Semantic Segmentation

| | avg class accuracy |
|-------------------------|--------------------|
| geometry only | 54.4 |
| geometry + voxel colors | 55.9 |

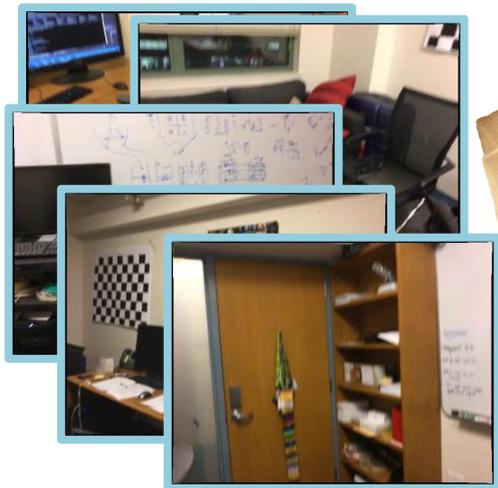

Resolution Mismatch!

3D Volumetric + Multi-view

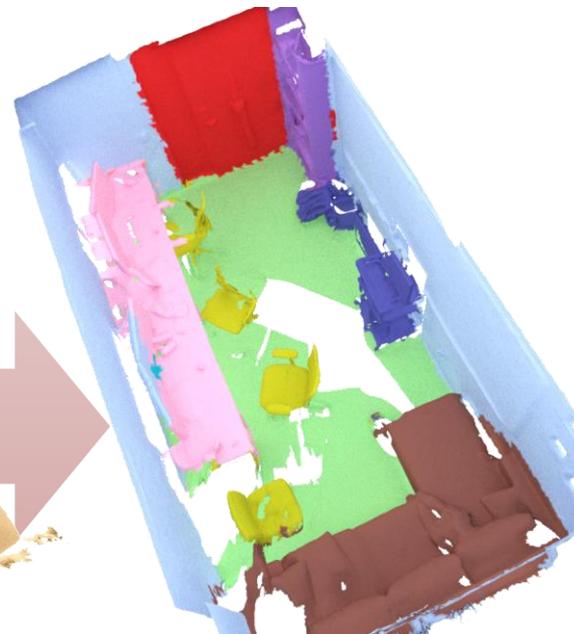

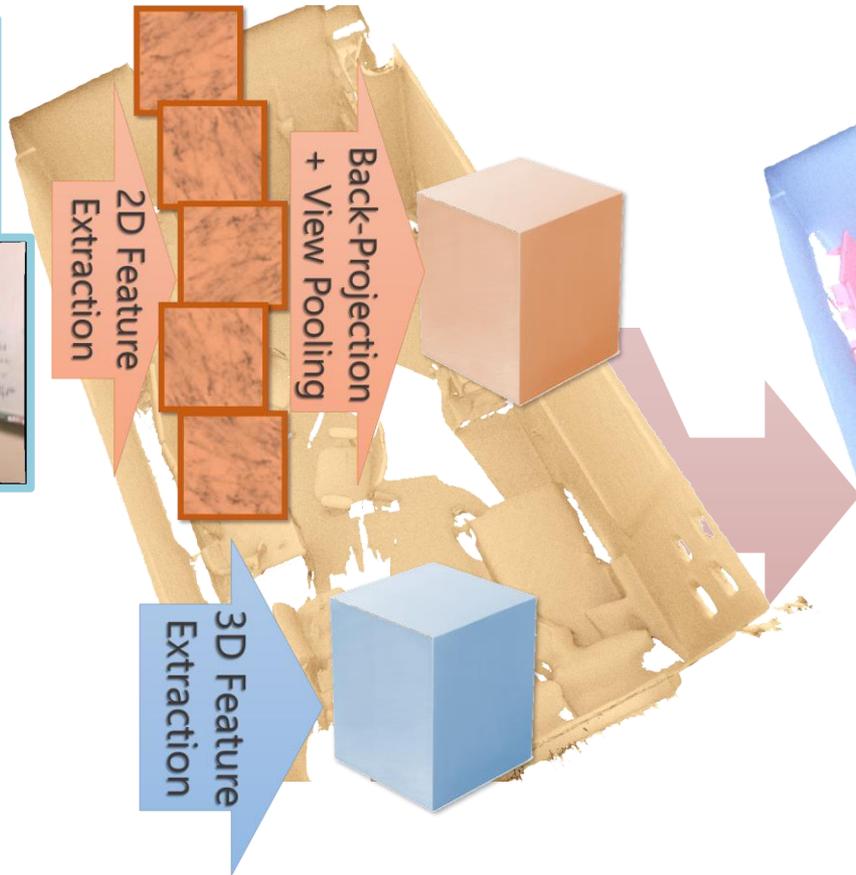

3D Volumetric + Multi-view

| color only | 58.2 |
| geometry only | 54.4 |

3D Volumetric + Multi-view

| | avg class accuracy |
|-----------------------|--------------------|
| color only | 58.2 |
| geometry only | 54.4 |
| color+geometry | 75.0 |

3D Volumetric + Multi-view

| | avg class accuracy |
|---------------------------------|--------------------|
| geometry only | 54.4 |
| color+geometry (1 views) | 70.1 |
| color+geometry (3 views) | 73.0 |
| color+geometry (5 views) | 75.0 |

3D Volumetric + Multi-view

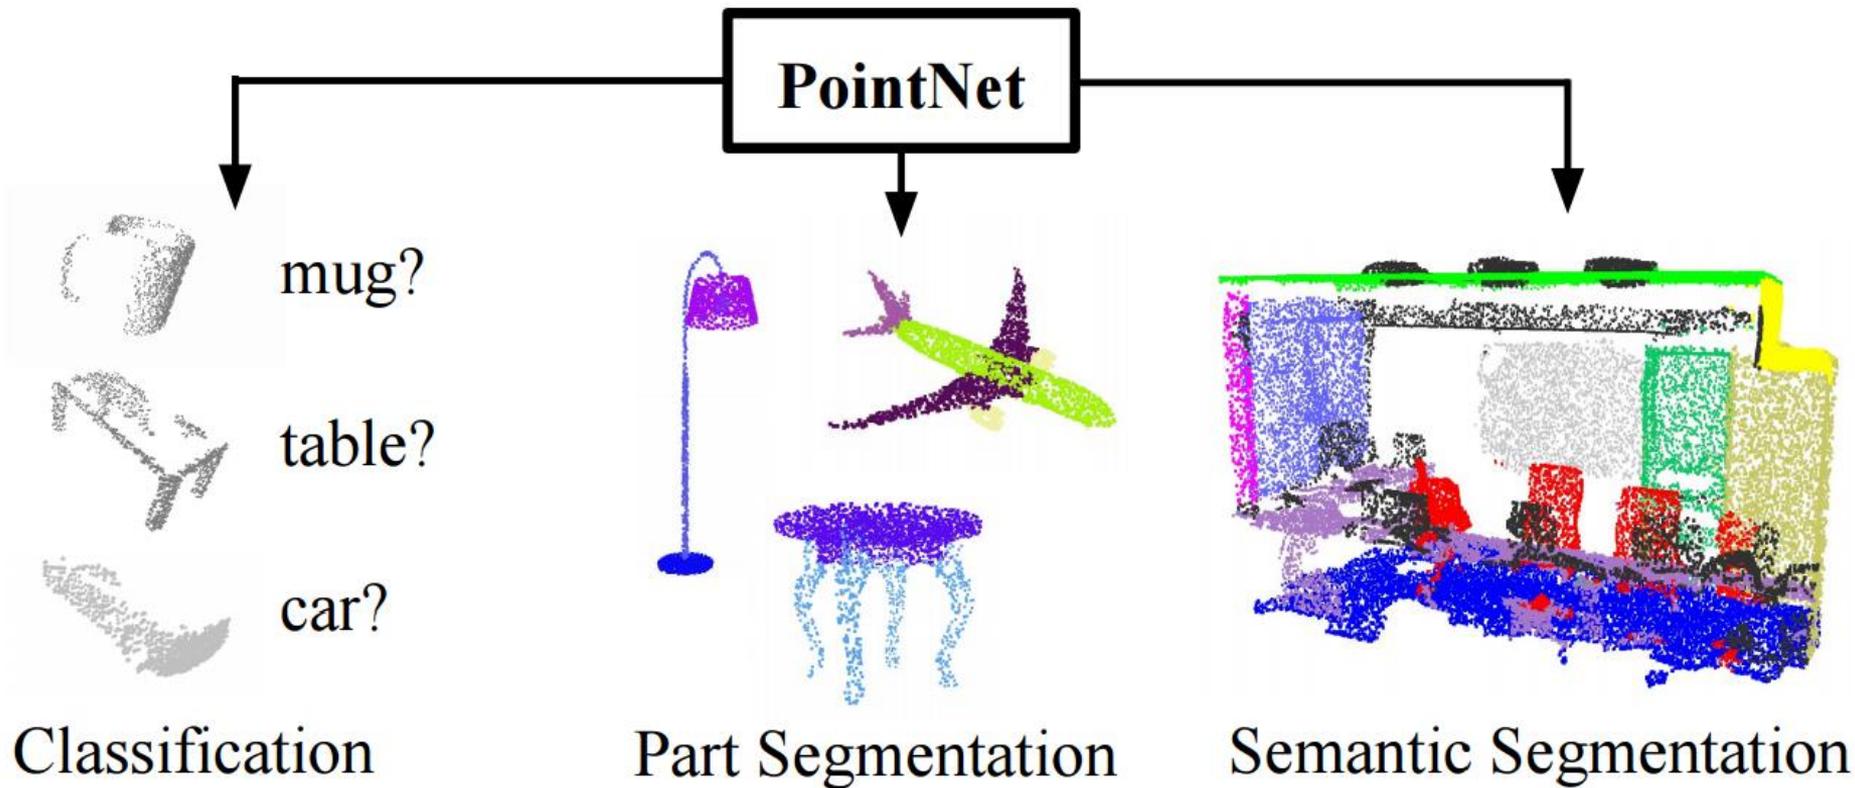

| | wall | floor | cab | | κ | bath | other | avg |
|---------------------------|-------------|-------------|-------------|-----|----------|-------------|-------------|-------------|
| 2d only (1 view) | 37.1 | 39.1 | 26.7 | | 2 | 36.3 | 20.4 | 27.1 |
| 2d only (3 views) | 58.6 | 62.5 | 40.8 | | 7 | 61.5 | 34.3 | 44.2 |
| Ours (no geo input) | 76.2 | 92.9 | 59.3 | | 0 | 80.8 | 9.3 | 58.2 |
| Ours (3d geo only) | 60.4 | 95.0 | 54.4 | | 3 | 87.0 | 20.6 | 54.4 |
| Ours (3d geo+voxel color) | 58.8 | 94.7 | 55.5 | | 4 | 85.4 | 20.5 | 55.9 |
| Ours (1 view, fixed 2d) | 77.3 | 96.8 | 70.0 | ... | 3 | 87.0 | 58.5 | 69.1 |
| Ours (1 view) | 70.7 | 96.8 | 61.4 | | 5 | 81.6 | 51.7 | 70.1 |
| Ours (3 view, fixed 2d) | 81.1 | 96.4 | 58.0 | | 1 | 92.5 | 60.7 | 72.8 |
| Ours (3 view) | 75.2 | 97.1 | 66.4 | | 1 | 89.9 | 57.2 | 73.0 |
| Ours (5 view, fixed 2d) | 77.3 | 95.7 | 68.9 | | 7 | 93.5 | 59.6 | 74.5 |
| Ours (5 view) | 73.9 | 95.6 | 69.9 | | 3 | 94.7 | 58.5 | 75.0 |

Conclusion so far

- Hybrid:
 - Nice way to combine color and geometry
 - Great performance (best so far for segmentation)
 - End-to-end helps less than we hoped for
 - Could be faster...

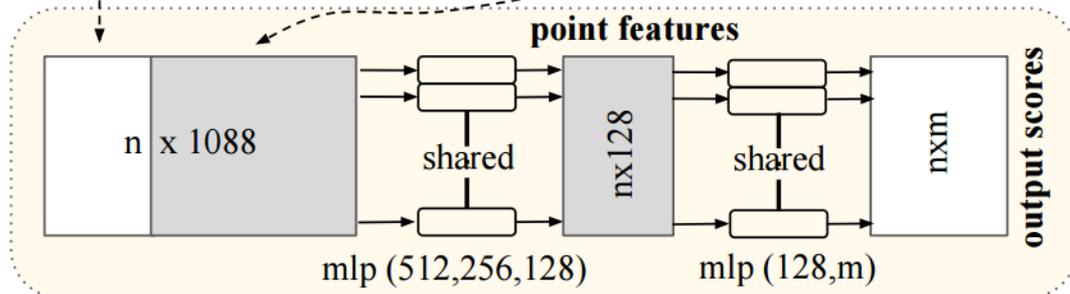

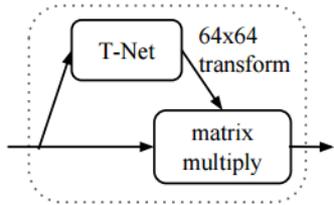

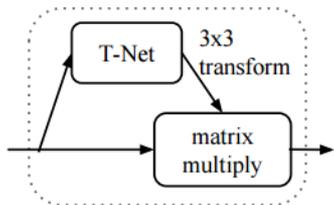

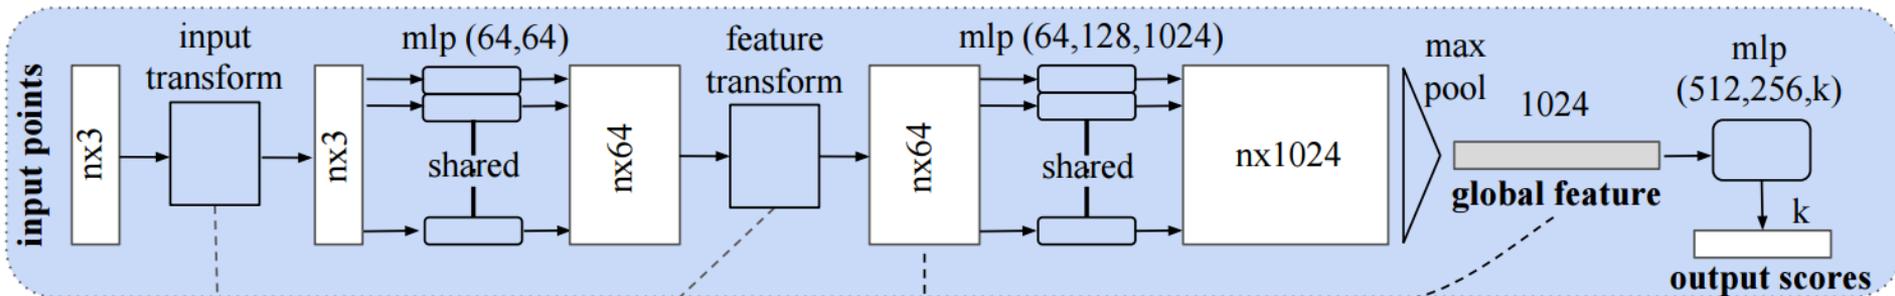

Point Clouds

Deep Learning on Point Clouds: PointNet

DeepLearning on Point Clouds: PointNet

Classification Network

Segmentation Network

PointNet++

Main idea

- Learn hierarchical representation of point cloud
- Apply multiple (simplified) PointNets at different locations and scales
- Each Scale: Furthest-Point Sampling \rightarrow Query Ball Grouping \rightarrow PointNet
- Multi-scale or Multi-resolution grouping for sampling density robustness

Evaluations: Classification, Part-Segmentation, Scene-Segmentation

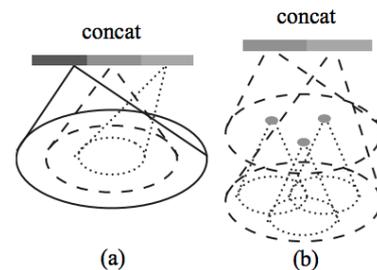

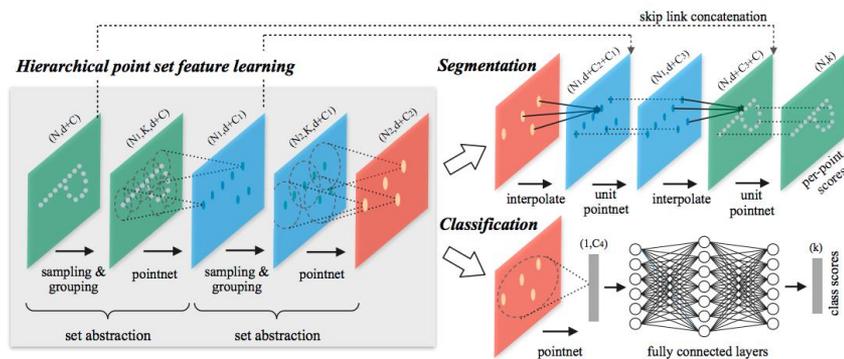

Figure 3: (a) Multi-scale grouping (MSG); (b) Multi-resolution grouping (MRG).

Point Convolutions

Main idea

- Transform points to continuous R3 representation (RBFs)
- Convolve in R3
- Restrict results to points

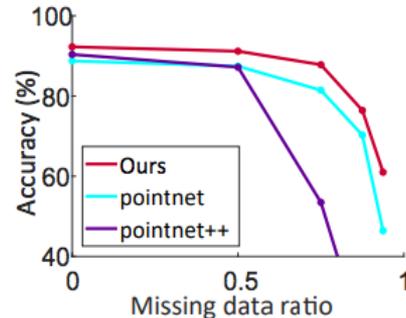

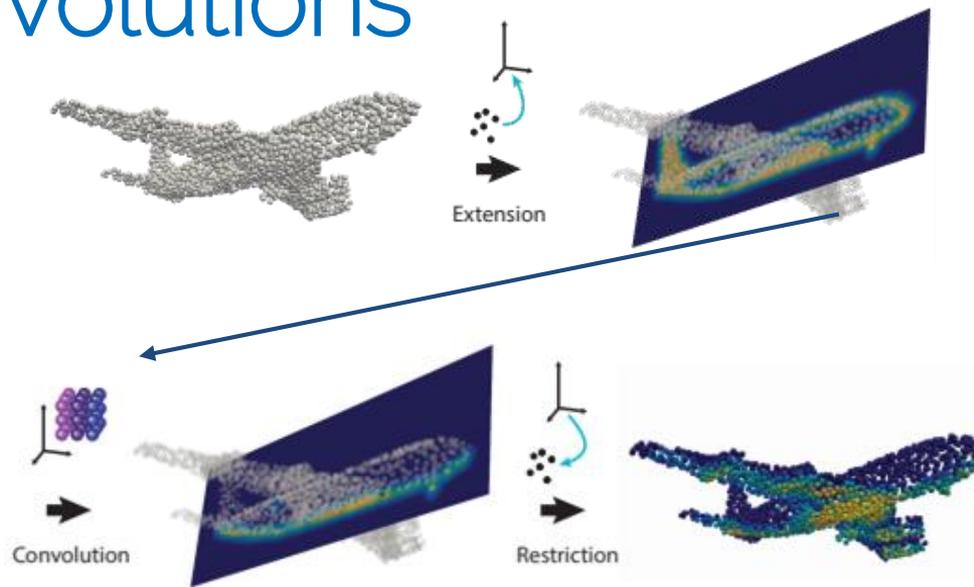

Uses Gaussian RBF representation.

Boils down to computing fixed weights for convolution.

Don't use real data as far as I know!

[Point Convolutional NN by Extension Operators](#)

Matan Atzmon, Haggai Maron, Yaron Lipman (SIGGRAPH 2018)

Conclusions so far

- PointNet variants:
 - Train super fast (also testing)
 - Can cover large spaces in one shot
 - Cannot represent free space
 - Performance (mostly) worse than pure volumetric
 - Still lots of ongoing research!

Point Sets (global)

Unordered point set

[PointNet](#) (CVPR 2017)

Hierarchy of point sets

[PointNet++: Deep Hierarchical Feature Learning on Point Sets in a ...](#) (NIPS 2017)

[Generalized Convolutional Neural Networks for Point Cloud Data](#) (ICMLA17)

Kd-tree

[Escape from Cells: Deep Kd-Networks](#) (ICCV 2017)

PointCNN

[PointCNN](#) (seems arxiv only)

Point Sets (local)

RBF

[Point Convolutional NN by Extension Operators](#) (SIGGRAPH 2018)

[Tangent Convolutions for Dense Prediction in 3D](#) (CVPR 2018)

Nearest point neighborhoods

[Dynamic edge-conditioned filters in convolutional neural networks on graphs](#) (CVPR17)

[3D Graph Neural Networks for RGBD Semantic Segmentation](#) (ICCV17)

[PPFNet: Global context aware local features for robust 3d point matching](#) (CVPR18)

[FeaStNet: Feature-Steered Graph Convolutions for 3D Shape Analysis](#) (CVPR18)

Very interesting combination where convolutions are essentially over line segments in 3D, and where both locations and are being optimized

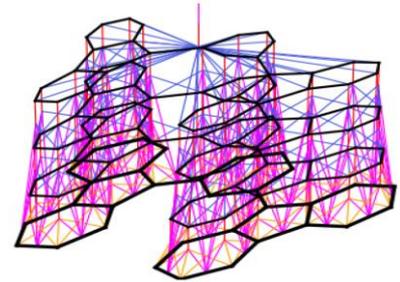

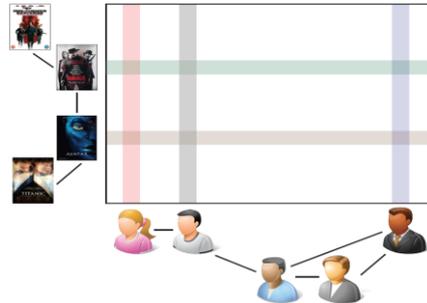

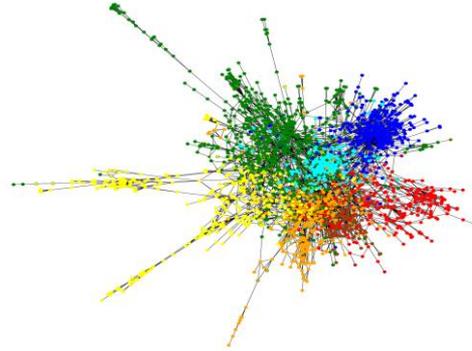

<https://arxiv.org/abs/1605.06240>

Idea is great, performance could be a bit better (probably hard to optimize)

Mesh-based

Convs on Meshes and Graphs

- Lots of work by Michael Bronstein et al.

Conclusion so far

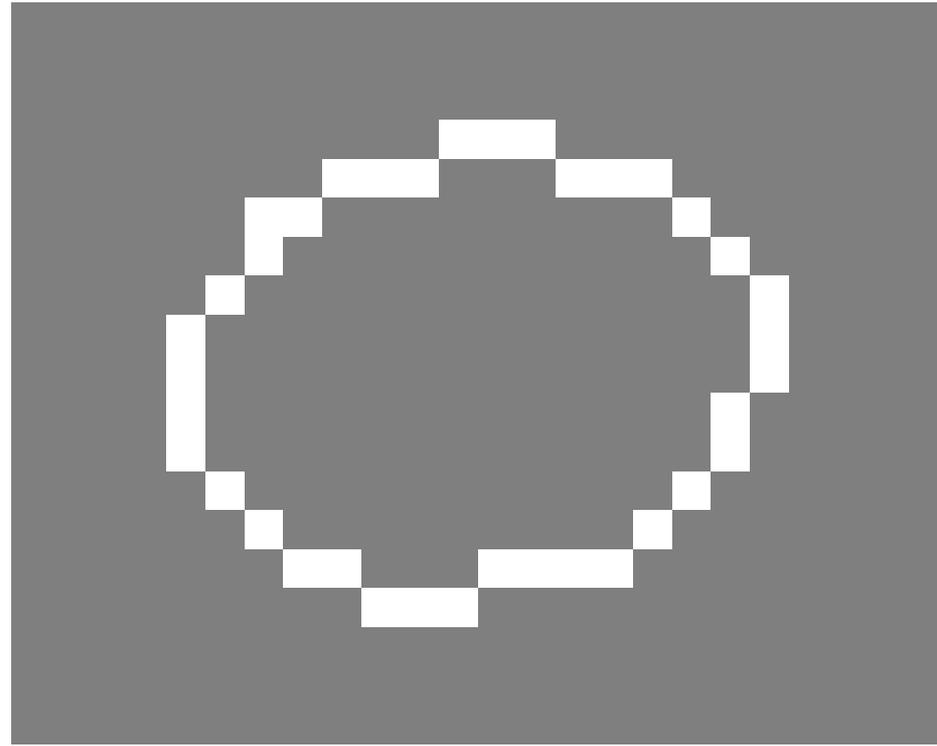

- Meshes / Surfaces:
 - Needs some differential geometry approximation
 - Convolutions in DG space
 - I haven't seen results on real-world data
 - Probably prone to noise and incomplete scans

Sparse Convolutions

Sparse Convolutional Networks

Regular, dense 3x3 Convolution

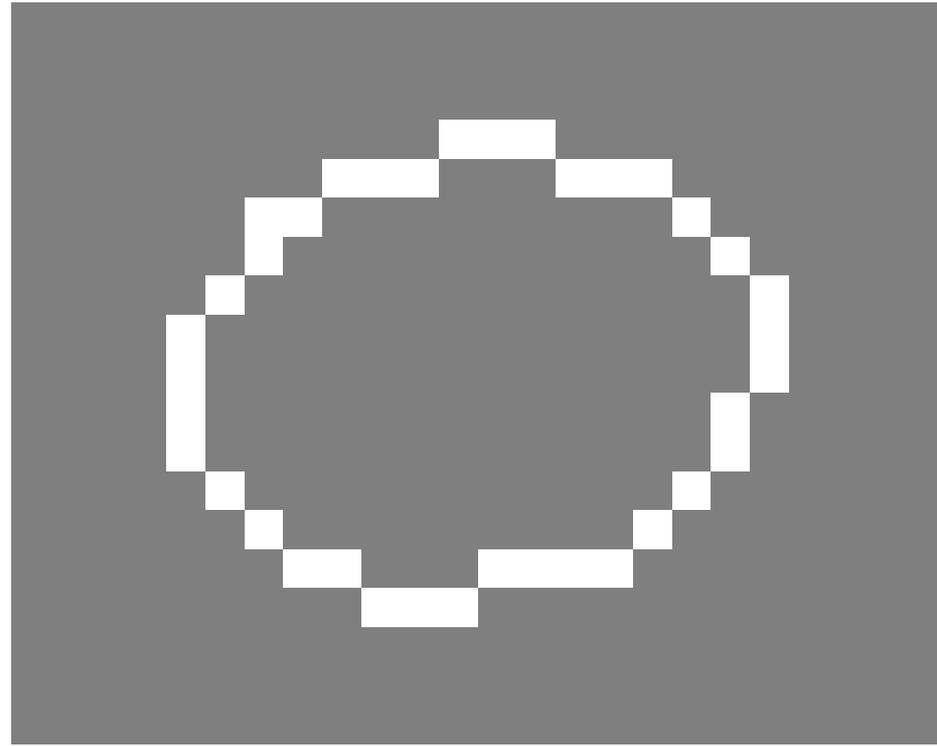

- > set of actives (non-zeros) grows rapidly
- > need a lot of memory
- > takes a long time for feature prop.

Sparse Convolutional Networks

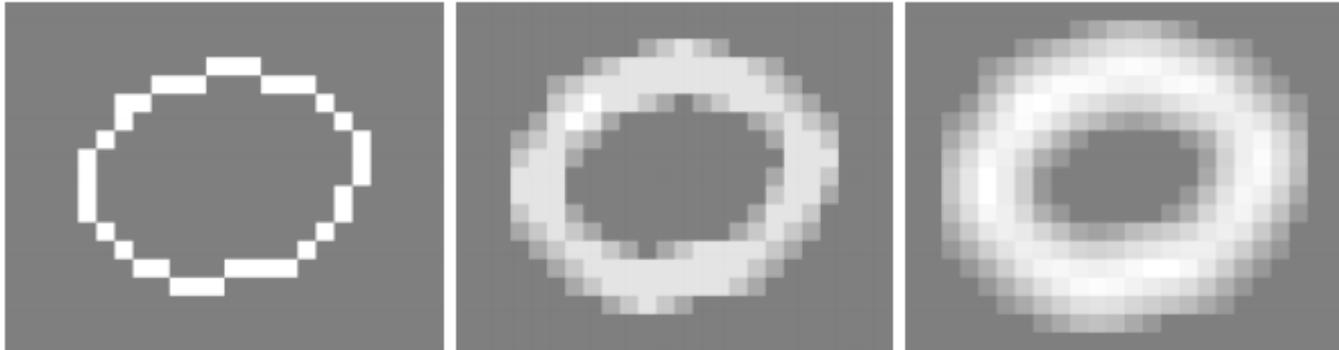

Regular, dense 3x3 Convolution

- > set of actives (non-zeros) grows rapidly
- > need a lot of memory
- > takes a long time for feature prop.

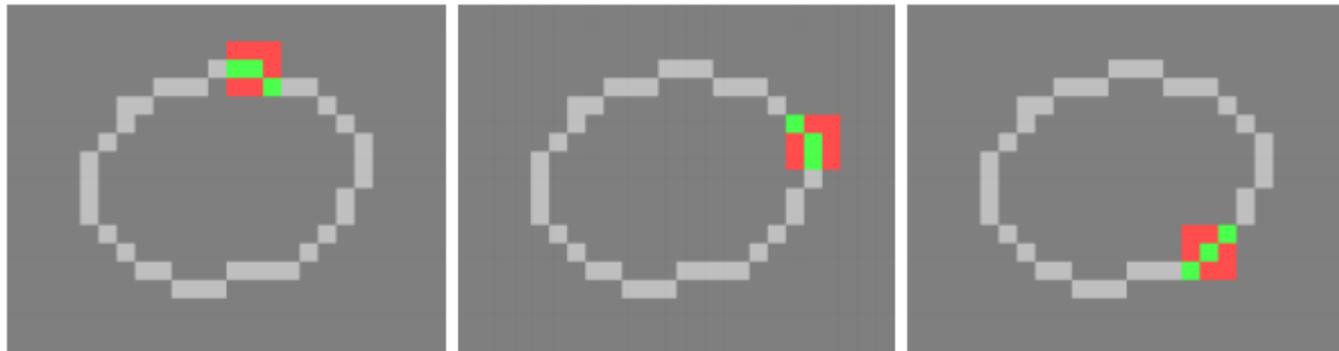

Sparse Convolutional Networks

Dense

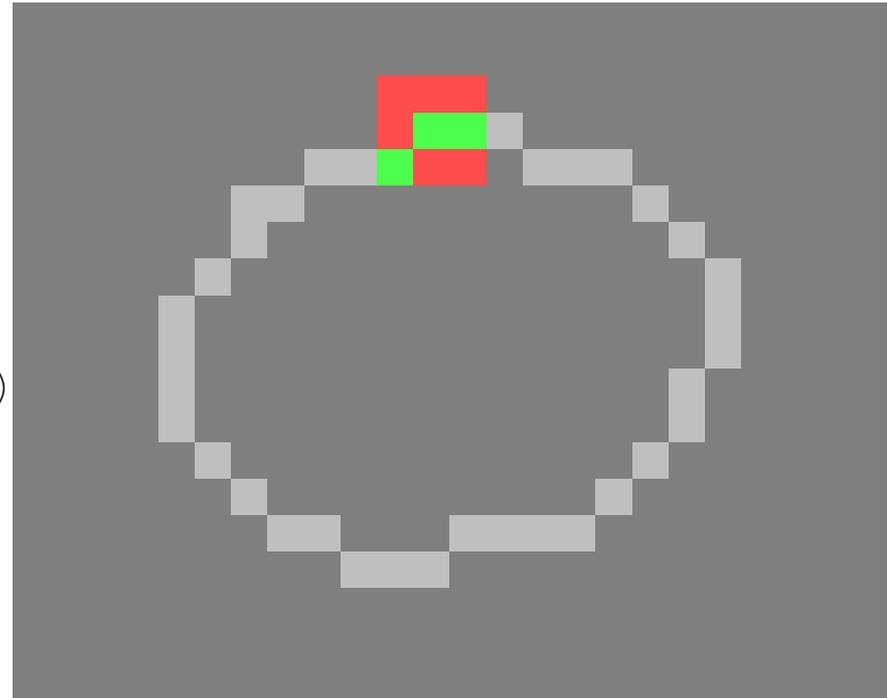

Sparse

Sparse Convolutional Networks

Submanifold Sparse Conv:

- > set of active sites is unchanged
- > active sites look at active neighbors (green)
- > non-active sites (red) have no overhead

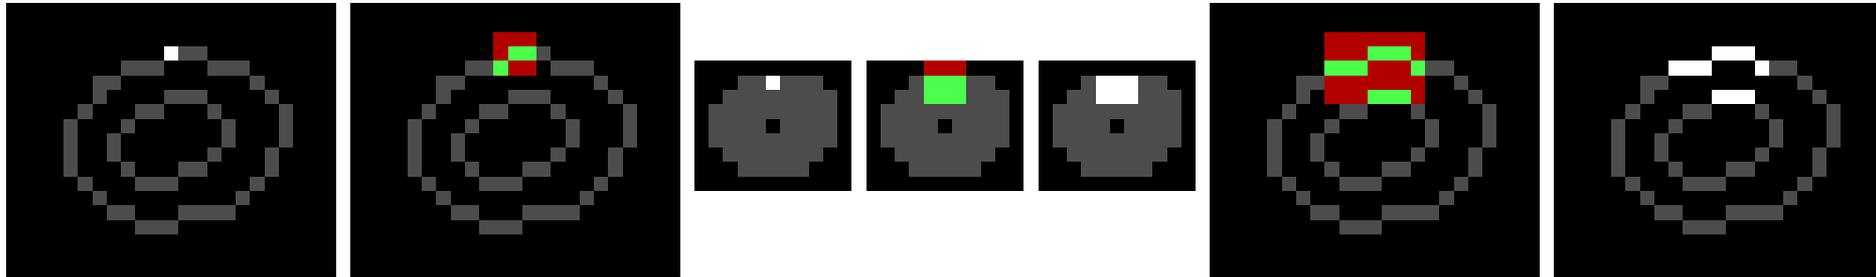

Sparse Convolutional Networks

Submanifold Sparse Conv:

-> disconnected components do not communicate at first

-> although they will merge due to effect of stride, pooling, convs, etc.

from left: (i) an active point is highlighted; a convolution with stride 2 sees the green active sites (ii) and produces output (iii), 'children' of highlighted active point from (i) are highlighted; a submanifold sparse convolution sees the green active sites (iv) and produces output (v); a deconvolution operation sees the green active sites (vi) and produces output (vii).

Sparse Convolutional Networks

| Dimension | Name in 'torch.nn' | Use cases |
|-----------|--------------------|---|
| 1 | Conv1d | Text, audio |
| 2 | Conv2d | Lines in 2D space, e.g. handwriting |
| 3 | Conv3d | Lines and surfaces in 3D space or (2+1)D space-time |
| 4 | - | Lines, etc, in (3+1)D space-time |

<https://github.com/facebookresearch/SparseConvNet>

Conclusions so far

- Spares (volumetric) Convs:
 - Implemented with spatial hash function
 - Features only around “surface”
 - Require significantly less memory
 - Allow for much higher resolutions
 - It's slower, but much higher accuracy

3D Scene Understanding

3D Semantic label benchmark

This table lists the benchmark results for the 3D semantic label scenario.

| Method | Info | avg iou | bathtub | bed | bookshelf | cabinet | chair | counter | curtain | desk | door | floor | otherfurniture | picture | refrigerator | sho curt |

Next Lectures

- This is the last lecture slot!
- Keep working on the projects!
- Research opportunities 😊 😊 😊

See you 😊
